

It's Time to Shine

Era Polymers Cleaning Range

Excellence in Polyurethane Chemistry

Era Polymers offer a variety of cleaning products to have your machinery looking good and functioning at its optimum. *It's time for your equipment to shine.* **Era Polymers cleaning products include:**

EraSolve

For cured PU

EraClean

For boiling up metal machine parts

Era Gun Flush

For low pressure mixing chamber flushing

MEK

Used for cleaning surfaces & tools

EraSolve

Is a unique solvent used in the polyurethane industry; it has two major functions:

1. A solvent for swelling cured polyurethane.
2. A primer for polyurethanes, PVC and other similar materials.

To use **EraSolve** as a cleaning product, soak mixing heads and equipment over night to soften the cured polyurethane elastomer.

Once soaked use a wire brush to clean away swelled polyurethane

EraClean

Is a solvent free product ideal for cleaning metal equipment parts such as mixing heads etc, used in polyurethane elastomer manufacture.

Simply place metal parts in a bath of **EraClean** and heat on a hot plate to 200oC for 20 – 60 minutes.

Once parts are cooled wash in warm soapy water or solvent to complete the cleaning process.

NOTE:

- *Teflon, Rubber or other Plastics should be removed from the assembly prior to cleaning.*
- *Ensure good ventilation or extraction during the cleaning process.*

Era Gun Flush

Flush your Spray Gun Clean. **Era Gun Flush** is a colourless liquid with low toxicity and a mild odour.

Era Gun Flush provides good solvency for a wide variety of resins including acrylic, epoxies, alkyds, polyesters, nitrocellulose and polyurethanes.

MEK - Methyl Ethyl Ketone

Also known as Methyl Ethyl Ketone. Is a solvent used for cleaning surfaces and tools and it can also be used to thin down solvented polyurethane systems.
